Texas State Operations Center

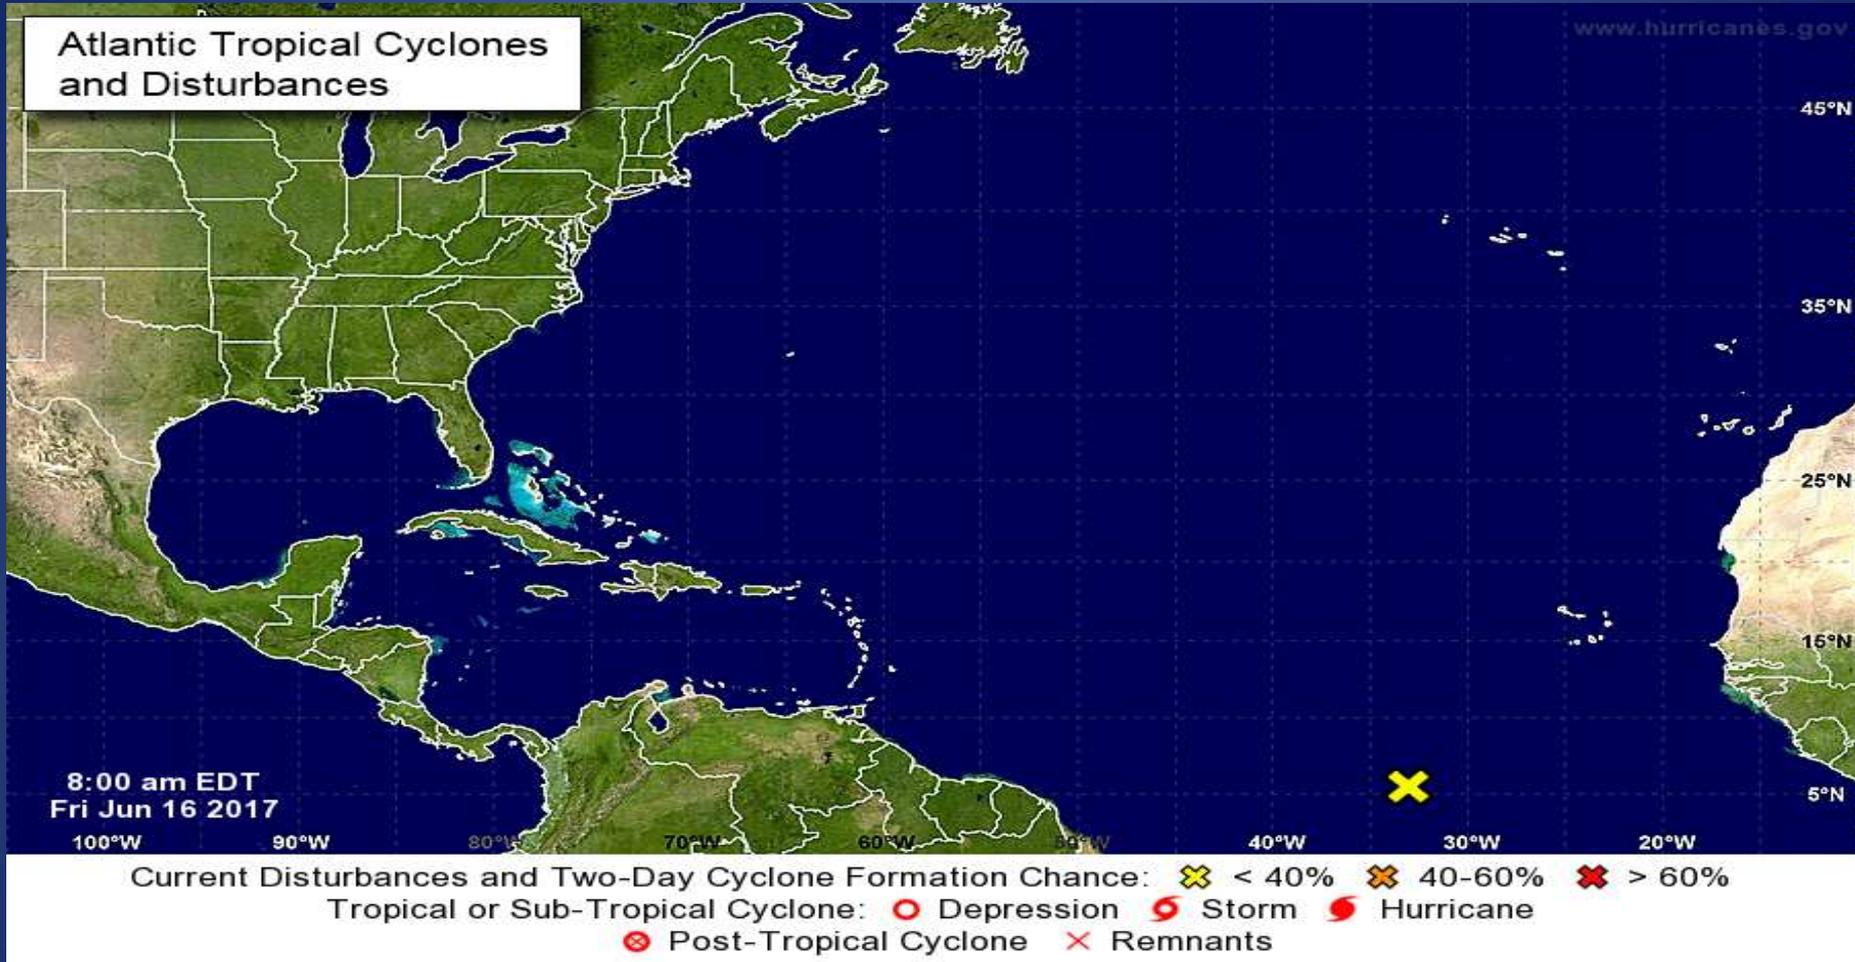

Situation Awareness Brief

Friday, June 16th 2017
As of 0900 CST

Tropical Weather Awareness

For the North Atlantic...Caribbean Sea and the Gulf of Mexico: 1. Cloudiness and showers associated with a tropical wave located several hundred miles southwest of the Cabo Verde Islands have become better organized since yesterday. Additional slow development is possible during the next few days while the wave moves westward at 15-20 mph over the tropical Atlantic. * Formation chance through 48 hours...low...20 percent. * Formation chance through 5 days...medium...40 percent. 2. A broad area of low pressure is expected to form over the northwestern Caribbean Sea and the Yucatan peninsula during the next day or two. Conditions appear to be favorable for gradual development of this system while it moves slowly northwestward into the southern Gulf of Mexico early next week. * Formation chance through 48 hours...low...near 0 percent. * Formation chance through 5 days...medium...60 percent.

5	High
4	Moderate
3	Enhanced
2	Slight
1	Marginal
	Thunder

Hazardous Weather

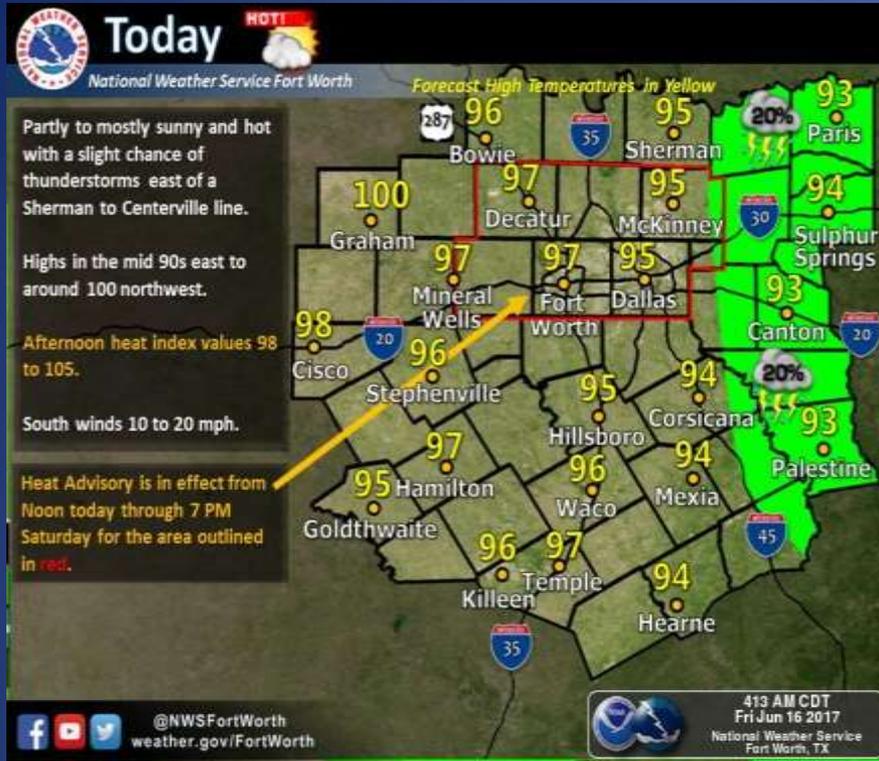

The heat will continue across the Oklahoma and Texas Panhandles today. High temperatures this afternoon will exceed 100 degrees across most of the area. There is also a slight chance of thunderstorms late this afternoon in eastern sections. If storms manage to develop, they will have the potential to become severe, with large hail and damaging winds the primary hazards

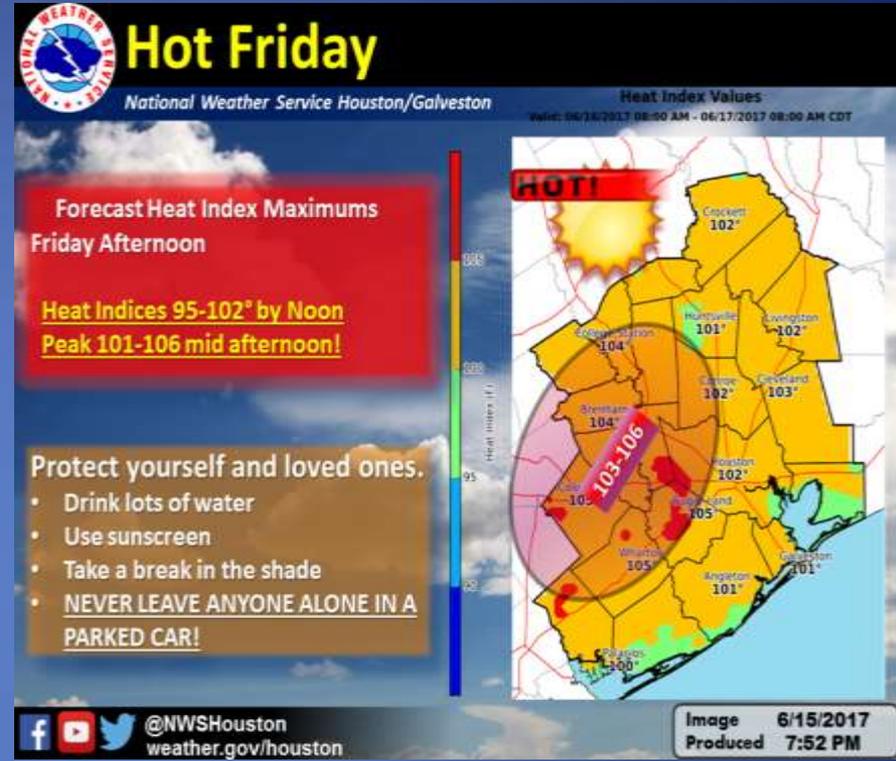

A dome of exceptionally hot and dry air will draw closer today and bring an end to rain chances. This dome will grip the region on Saturday when some locations such as Lubbock are likely to set new daily record highs.

Hazardous Weather

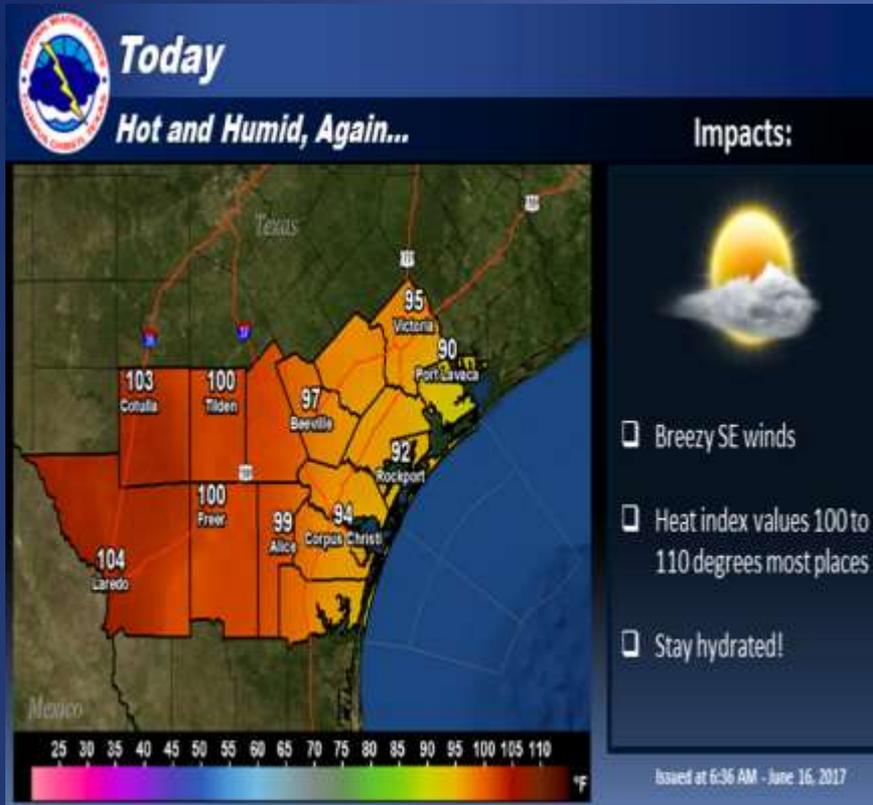

It will be partly to mostly sunny and hot today with a slight chance of thunderstorms east of a Sherman to Corsicana to Centerville line. Highs will be in the mid 90s east to around 100 degrees northwest. Afternoon heat index values will range from 98 to 105 degrees. A Heat Advisory is in effect until 7 PM Saturday for Wise, Denton, Collin, Parker, Tarrant, Dallas and Rockwall Counties

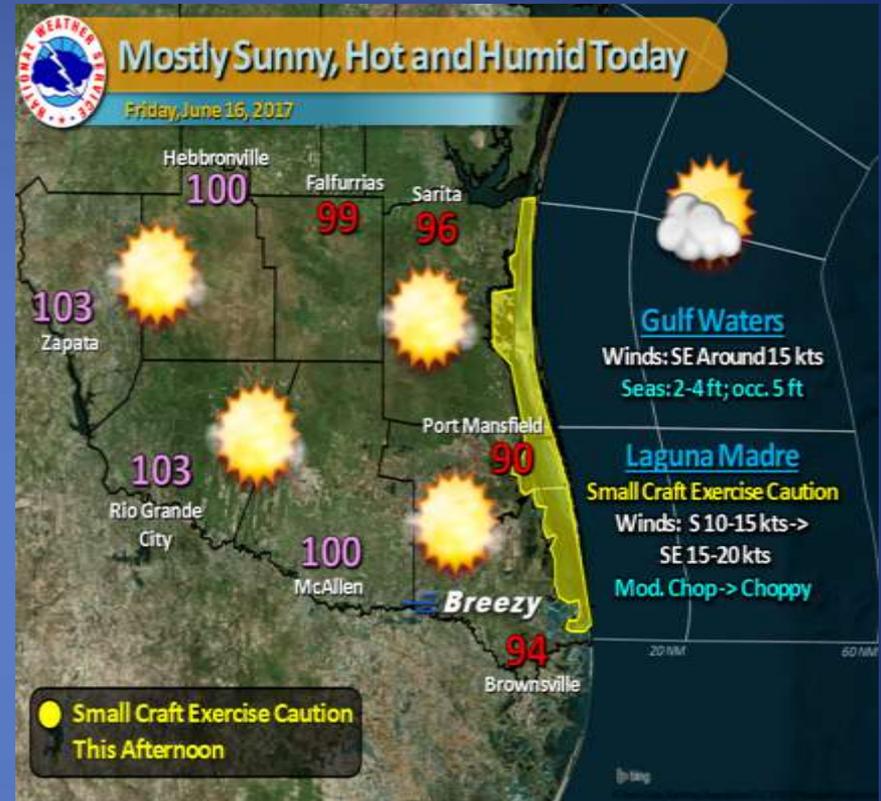

Abundant sunshine will combine with the humid air flowing in off the Gulf to boost the heat index across the region. Heat index readings in the 90s near the coast in the morning will climb to near 100 before noon. Further inland heat index reading of 95 will be commonplace by 11 am and peak at 102 to 106 by mid afternoon. This heat can be dangerous, stay hydrated, use sunscreen, get out of the sun and take a break in the shade and Never Leave Anyone Alone In A Vehicle!

Hazardous Weather

Another hot and humid day across South Texas. Heat indices back above triple digits with pockets of 105-109 degrees along the interior Coastal Bend and Rio Grande Plains. If you have plans to be outside, remember to stay hydrated and wear light colored clothing. If traveling with children or pets today, always be sure to 'Look Before You Lock'

Mostly sunny skies with breezy southeast winds will keep deep south Texas and the Rio Grande Valley hot and humid today. High temperatures this afternoon will range from the mid and upper 90s to the low triple digits with heat indices near or slightly above 100- 105 degrees. Small craft should exercise caution on the Laguna Madre this afternoon with a moderate chop on the bay increasing to choppy conditions. Expect seas of 2 to 4 feet and occasionally 5 feet across the Gulf waters out to 60 nautical miles
